ABOUT

Senior Go Backend Engineer with 6+ years of commercial experience building high-load systems in fintech, cloud infrastructure, and large-scale e-commerce.

I can manage the full software development lifecycle: from translating business requirements and architectural design to production release and observability.

Strong expertise in microservices, payment gateways, and backend logistics. Aligned with a culture of high ownership and execution, focus on delivering measurable business impact, optimizing performance, and collaborating closely with cross-functional teams to release stable, high-quality products.

SKILLS

- Languages & Protocols: Go (Golang), Java, SQL, gRPC, HTTP, REST API
- Databases, Caching & Streaming: PostgreSQL, Redis, Apache Kafka, RabbitMQ, MySQL, MongoDB, ClickHouse
- Cloud & Infrastructure: AWS, Google Cloud Platform (GCP), Kubernetes (k8s), OpenShift, Docker
- CI/CD & Automation: GitLab CI/CD, Jenkins
- Observability & Logging: Prometheus, Grafana, Kibana, ELK
- Architecture & Concepts: High-Load & Distributed Systems, Microservices Architecture, System Design, Concurrency (Goroutines/Channels), Caching Strategies, RBAC

EXPERIENCE

Joom | Senior Golang Developer

03/2025 - PRESENT, 1 year

- Led the development of a Go/PostgreSQL RBAC platform, accelerating access grant processing speed by 5x.
- Built an automated Jira/Slack incident response bot, reducing Mean Time to Acknowledge (MTTA) by 52.4%.
- Designed REST services for HR/IT automation, eliminating 72.1% of manual data-entry errors.
- Integrated courier and asset APIs into offboarding workflows, cutting completion time by 39.2%.
- Automated CI/CD pipelines (GitLab, Docker, Helm, Kubernetes), tripling deployment frequency.
- Optimized complex SQL queries and indexing strategies, accelerating critical database operations by 4x–10x.

SumUp | Senior Golang Developer

02/2023 - 03/2025, 2 years

- Designed a real-time Route Decision Engine using precomputed caching (60% hit rate) to handle 10x traffic spikes; reduced late deliveries from 12% to 4%.
- Developed a Customs & Duty Calculator covering 15K+ regional rules; implemented fallback classification, cutting manual reviews by 20%.
- Replaced batch processing with a real-time ETA system handling 500K+ daily events, improving ETA accuracy to ±1 day for 85%+ of orders.
- Introduced fulfillment route A/B testing, slashing new hub/partner onboarding time from 2 weeks to <1 day.

EPAM Systems | Golang Developer

01/2020 - 02/2023, 3 years

- Led a core Java-to-Go service migration, boosting throughput by 3x, reducing memory by 40%, and cutting response times by 30%.
- Architected a high-load distributed microservice platform across 6 regions (24 servers), handling 5M+ daily requests with 99.9% uptime.
- Optimized system architecture and eliminated performance bottlenecks, cutting peak-time latency by 35%.
- Overhauled production reliability and incident management, reducing incident frequency by 45% and slashing MTTR from 40 to <15 minutes.
- Implemented end-to-end observability (Prometheus, Grafana) with 20+ custom dashboards, accelerating incident detection by 50%.

EDUCATION

Charles University — BACHELOR, 2018 - 2022

Information and computer science
